

SageRank business card: print order sheet

Customer: Veera Venkatesh, SageRank Software Solutions FZ-LLC | +971 56 801 5996 |
veer@sagerank.io

The job in one line: double-sided business card, full colour on both sides, **final size 3.5 × 2 in (88.9 × 50.8 mm)**. Print the file 1_SEND-THIS-T0-PRINTER_...pdf at **100%** (no scaling, no "fit to page") and cut on the **trim line**. **Page 1 = FRONT, page 2 = BACK.**

1. EXACT SIZES

	Inches	Millimetres	Points	What it is
Final card (TRIM)	3.5 × 2.0	88.9 × 50.8	252 × 144	Size after cutting. The cut line.
PDF page size (with bleed)	3.75 × 2.25	95.25 × 57.15	270 × 162	File size = card + bleed on all four sides.
Bleed (each side)	0.125	3.175	9	Extra colour past the cut line. Gets cut off.
Safe margin	0.30	7.6	21.6	All text, logo and QR are at least this far inside the cut line.
Rounded corners (optional)	0.12	3 (radius)	8.5	If you round the corners, 3 mm radius. Nothing important is near a corner.

The PDF has its TrimBox and BleedBox set, so your software shows the cut line automatically. Orientation: landscape.

2. SIMPLE WORDS

- **Trim** = the final size of the card. You cut here.
- **Bleed** = colour that runs past the cut line, so a cutting error never leaves a white edge. The **blue bar touches the edge on purpose**. The extra 3.175 mm is cut away.
- **Safe area** = nothing important is closer to the edge than 7.6 mm.

3. PRINTING THE TWO SIDES

- Front has a blue bar on the **left** edge. Back has a blue bar on the **right** edge.
- Turn the printed card **sideways like a book page** (flip on the short edge). Both bars must meet at the same physical edge, and the back must read upright.
- **Do NOT flip top-to-bottom: the back would be upside down.**

4. COLOUR

- Print 4/4 (full colour both sides). The artwork is **RGB**: please convert to CMYK with your standard profile and send a **proof**.
- **Brand blue: HEX #1D70D1** (RGB 29 / 112 / 209). Approx. CMYK **87 / 55 / 0 / 0** (a guide only, match the hex on the proof).
- **Black:** logo bars are pure black. Text is very dark navy (#0B0F17) and small: please print it as **K-only black**, not a 4-colour mix.
- Greys (#5B6676, #D3DAE6) are used for small text and a thin line.

5. FILES AND FONTS

- All text is converted to outlines. No fonts needed. Logo and QR are vector.
- Do not re-draw, resize or re-colour the logo. Do not add a border.
- **QR code** opens <https://www.sagerank.io/veer>. Please scan the printed proof.

6. PAPER AND FINISH (SUGGESTION, I AM OPEN TO YOUR ADVICE)

350 gsm matte card, matte lamination (or uncoated). Please avoid a glossy finish over the small text. No foil, spot UV, embossing or folds. **Quantity:** _____ Rounded corners: ☐ yes ☐ no

7. LAYOUT GUIDE (NOT PART OF THE PRINT FILE)

Layout guide: what the three lines mean

Same artwork as the print file, with guide lines drawn on top. The guide lines are NOT in the print file.

- Black outer edge = BLEED edge

File edge. 3.75 × 2.25 in (95.25 × 57.15 mm).

Colour (the blue bar) must reach this edge.

This outer 0.125 in is cut away.
- Pink dashed = TRIM (cut line)

Final card. 3.5 × 2 in (88.9 × 50.8 mm).

Cut exactly here.
- Green dashed = SAFE area

0.3 in (7.6 mm) inside the cut line.

All text, logo and QR code are inside it,

so nothing is cut off or touched by rounded corners.

Before you print, please check: page size 3.75 × 2.25 in, 2 pages, printed at 100% | cut on the pink line | blue bar reaches the edge | QR code scans | send me a PDF proof and, if possible, one printed sample before the full run.
